

Hobo Stove

The Hobo stove is simplicity itself. Made of nothing more than a tin can, and powered by anything that burns - charcoal, sterno, or a buddy .

Supplies:

- Tin can (4-10" diameter)
- Tin snips
- Punch-type can opener
- Roll-type can opener

Procedure (refer to picture for examples):

- Using the roll-type can opener remove one end of the can.
- Using the punch-type can opener, make a series (6-8) of holes around the top of the can.
- Using the snips cut an opening in the other side of the can large enough to slide a tuna or catfood can through.

Usage:

- Light the fuel:
 - 3-4 charcoal briquette in tuna can
 - sterno fuel
 - buddy burner
- Slide the fuel through the opening in the bottom of the can.
- Cook directly on the top of the can as soon as it's hot enough.
